

It is the assembly equipment used in order to connect the temperature sensors to the process. It is used in order that the process does not cease in the sensor replacement, and sensor is not damaged by contacting with the process directly.

It can be manufactured from welded (standard) or full material.

All products are undergone from the hydraulic permeability test. Furthermore, penetration test can be also made optionally. It can be also ordered with material certificate and manufacturer test certificate.

Areas of Applications :

Chemical industry, process technology, with temperature displays...

ELX THERMOVEL

ELX 51 (Threaded Type)

ELX 52 (Flat Type)

ELX 53 (Flanged Type)

ELX 54 (Sanitary Type)

ELX 55 (Dairy Type)

Advantage :

- * Various type material options (316, 316L, 316T, 321, Titanium, Hastelloy etc.)
- * Various connection options
- * Fast delivery
- * Manufacturer test certificate.
